

ABSTRACT

Bayu Krisnatama, "Income Analysis and Business Impact of Mining Rocks (Case Study Mining of Batuan Gunung Maddah Village Sampang Sub-District Sampang District)". Supervised by Dr. Eni Sri Rahayuningsih, SE., ME.

The purpose of this research to analyze revenue in the mining business owners and the perceived impact of the public with rock mining business. This study uses descriptive qualitative and quantitative methods using primary data and secondary data. Informants in this study focused on the mining sector business owners in communities around the rocks and rock mining area. Data analysis phase includes the reduction and presentation of data and drawing conclusions. Used triangulation to test the validity of the data.

The results showed that the business of mining rocks most profitable and loss-making. Namely a profitable business venture rock milling and transportation services business. Meanwhile unprofitable business activities namely dredging business and part of transport services. Despite losing business is still ongoing for a number of business owners do not calculate such costs should be calculated, machinery depreciation costs, cost of service, cost businesses, flower business capital and labor from family members. Thus business owners assume the business profitable, although the actual loss. In addition, the mining business is also positive and negative impacts. The positive impacts include: the creation of jobs, the growth of new businesses, and the construction of public facilities. While the negative impacts include: environmental pollution such as dust, damage to infrastructure such as damaged roads and public health declined. Thus the need for special monitoring and evaluation of rock mining in the Gunung Maddah Village. mining business is also positive and negative impacts. The positive impacts include: the creation of jobs, the growth of new businesses, and the construction of public facilities. Keywords: Mining, Rock, Revenue, and Impact.

ABSTRAK

Bayu Krisnatama, “Analisis Pendapatan dan Dampak Usaha Pertambangan Batuan (Studi Kasus Pertambangan Batuan Desa Gunung Maddah Kecamatan Sampang Kabupaten Sampang)”. Dibimbing oleh Dr. Eni Sri Rahayuningsih, SE.,ME.

Penelitian ini bertujuan untuk menganalisis pendapatan para pemilik usaha di pertambangan dan dampak yang dirasakan masyarakat dengan adanya usaha pertambangan batuan. Penelitian ini menggunakan metode kualitatif dan metode kuantitatif deskriptif dengan menggunakan data primer dan data sekunder. Informan pada penelitian ini adalah para pemilik usaha di sektor tambang batuan, para pekerja di sektor tambang dan masyarakat sekitar area tambang batuan. Tahap analisis data meliputi reduksi dan penyajian data serta penarikan kesimpulan. Digunakan triangulasi sumber untuk menguji keabsahan data.

Hasil penelitian menunjukkan bahwa usaha dari pertambangan batuan sebagian menguntungkan dan merugi. Usaha yang menguntungkan yaitu usaha penggilingan batuan dan usaha jasa angkutan. Sementara itu usaha yang merugi yaitu usaha pengerukan dan sebagian jasa angkutan. Meskipun merugi usaha tersebut masih terus berlangsung karena pemilik usaha tidak menghitung sejumlah biaya yang seharusnya dihitung seperti, biaya penyusutan mesin, biaya service, biaya tempat usaha, bunga modal usaha dan upah tenaga kerja dari anggota keluarga. Dengan demikian pemilik usaha menganggap usahanya menguntungkan, meskipun sebenarnya rugi. Selain itu, usaha pertambangan juga menimbulkan dampak positif dan negatif. Dampak positif berupa : terciptanya lapangan pekerjaan, tumbuhnya usaha baru, dan pembangunan fasilitas umum. Sedangkan dampak negatif yang ditimbulkan berupa : pencemaran lingkungan berupa debu, kerusakan infrastruktur berupa jalan rusak dan kesehatan masyarakat menurun. Dengan demikian perlu adanya pengawasan khusus dan evaluasi terhadap pertambangan batuan di Desa Gunung Maddah.

Kata kunci : Pertambangan, Batuan, Pendapatan, dan Dampak.
