Under the guidance of Drs. Makhmud Zulkifli, M.Si.

The purpose of this study was to determine the effect of Earning Per Share (EPS), Price Earning Ratio (PER), Return On Equity (ROE), Net Profit Margin (NPM), and Current Ratio (CR) on transportation and logistics companies on the Indonesia Stock Exchange, both partially and simultaneously on Stock Prices. This research uses quantitative methods. Using multiple linear regression analysis. The data in this study uses secondary data obtained from the Indonesia Stock Exchange (IDX). Sampling using purposive sampling method and obtained a sample size of 14 companies from 37 companies. Hypothesis testing is done with multiple linear analysis. The results of the F test show that Earning Per Share (EPS), Price Earning Ratio (PER), Return On Equity (ROE), Net Profit Margin (NPM), and Current Ratio (CR) have a positive and significant effect on stock prices. The T test results show that partially Earning Per Share has an effect on stock prices, Price Earning Ratio has an effect on stock prices, Return On Equity has no effect on stock prices, Net Profit Margin has no effect on stock prices, and Current Ratio has no effect on stock prices, with a coefficient of determination (R^2) of 0.141 which means that the independent variable is able to explain the dependent variable by 14.1%. While the rest is explained by other variables not included in this study.
