

ABSTRACT

Paramesti, U.V. 190511100060. English Study Program. A Grammatical Cohesive Device Analysis of Kamala Devi Harris' Speech at Vaccination Mobilizing Event. Universitas Trunojoyo Madura.

This study investigates grammatical cohesive devices in Kamala Devi Harris' speech. The speech being discussed is speech at vaccination event.

The data found in this study is from video speech that is provided on Youtube.com. and speech transcription that is taken from Whitehouse official websites whitehouse.gov. The method to be applied in this study is descriptive qualitative method. The researcher used this method since the study has no any relations with counting. In investigating grammatical cohesive devices contains in the speech, the researcher chose Halliday and Hasan's book (1989) as the applied theory. This theory is used by the researcher in helping her to identify the devices of grammatical cohesion in several utterances of Kamala Devi Harris' speech.

The results show that there are three devices of grammatical cohesion noticed within the utterances of the speech. These three devices are reference, substitution, and conjunction. The device of grammatical cohesion that is mostly used within the utterances of the speech is reference with demonstrative device. Besides that, the researcher of this study also investigates each function of grammatical cohesive devices contained within the speech. The result shows that functions of each grammatical cohesive device within the speech have different functions.

Keywords: Grammatical Cohesive Devices, Speech, Vaccination.
