ABSTRAK

Tujuan penelitian ini adalah untuk mengetahui pengaruh lagu Pantai Siring Kemuning untuk menstimulasi kosakata bahasa Madura anak. Penelitian ini menggunakan metode pendekatan kuantitatif metode eksperimen semu (*Quasi Exsperimental*) dengan model *Pretest-Posttest Nonequivalent Control Group Design*. Subjek dalam penelitian ini merupakan anak kelompok B usia 5-6 tahun di TK YKK 1 Bangkalan dengan jumlah 30 anak. Teknik pengumpulan data dalam penelitian ini adalah observasi, tes, dan dokumentasi. Penelitian ini menggunakan analisis data statistik parametrik. Berupa uji *Independent Sample T-test* dengan hasil pre-test dan post-test dari kelompok kontrol dan kelompok eksperimen. Adapun hasil *pre-test* kelompok kontrol yaitu 24,50 sedangkan untuk hasil *pre-test* kelompok eksperimen yaitu 28,00. Hasil *post-test* kelas kontrol diperoleh 31,19 dan *post-test* kelas eksperimen yaitu 46,63. Hasil perhitungan dengan uji *Independent Sample T-test* diperoleh nilai Sign. (2-tailed) sebesar $0,000 < 0,05$. Selanjutnya, hasil nilai t hitung adalah sebesar 12,532, dengan membandingkan nilai t tabel sebesar 2,042. Dapat disimpulkan nilai t hitung sebesar $12,532 \geq t$ tabel 2,042, maka berdasarkan dasar pengambilan keputusan melalui perbandingan nilai t hitung dengan t tabel, bahwa H_0 ditolak dan H_a diterima. Sehingga diketahui bahwa terdapat pengaruh lagu Pantai Siring Kemuning untuk menstimulasi kosakata bahasa Madura anak.

Kata Kunci : Anak Usia Dini, Lagu Anak, Pantai Siring Kemuning, Kosakata Bahasa Madura.

ABSTRACT

The purpose of this study was to determine the effect of Pantai Siring Kemuning song to stimulate children's Madurese vocabulary. This study uses a quantitative approach method of quasi-experimental method with Pretest-Posttest Nonequivalent Control Group Design model. The subjects in this study were group B children aged 5-6 years at YKK 1 Bangkalan Kindergarten with a total of 30 children. Data collection techniques in this study were observation, tests, and documentation. This study uses parametric statistical data analysis. In the form of Independent Sample T-test test with pre-test and post-test results from the control group and experimental group. The pre-test result for the control group was 24.50 while the pre-test result for the experimental group was 28,00. The post-test results for the control class were 31.19 and the post-test for the experimental class was 46,63. The results of the calculation with the Independent Sample T-test test obtained a value Sign. (2-tailed) of $0.000 < 0.05$. Furthermore, the result of the calculated t value is 12,532, by comparing the t table value of 2.042. It can be concluded that the t value of $12,532 \geq t$ table 2.042, then based on the basis of decision making through the comparison of the t value with the t table, that H_0 is rejected and H_a is accepted. So it is known that there is an effect of Pantai Siring Kemuning song to stimulate children's Madurese vocabulary.

Keywords: Early Childhood, Children's Song, Siring Kemuning Beach, Madurese Language Vocabulary.
