ABSTRACT

This study is a quantitative study using Non Eksperimental Design, this study conducted in class I-VI of SDN Sogian 2 Sumenep that consists of 60 students. This study aims to know the relationship of the economic level of parents towards student's learning motivation. The results of the study show that there is a significant relationship between the economic level of parents towards student's learning motivation based on the results of significant test calculation (t-test), it is obtained that the value of t_{count} is 22,644 and $t_{table} t(\alpha/2, n-2) = 2,002$. The correlation coefficient value is 0,948 with very strong category. In addition, the hypothesis is accepted based on the value of t_{count} and t_{table} which is obtained $t_{count} > t_{table}$, it means that H_o is rejected and H_a is accepted. So that there is a significant relationship between the economic level of parents towards student's learning motivation in SDN Sogian 2 Sumenep Regency. Determination test that conducted to know the contribution given by variable X (the economic level of parents) to variable Y (learning motivation) obtains 89,8% and it can be concluded that the economic level of parents is significantly related to student's learning motivation of 89,8%.

Keywords: Economic Level of Parents, Learning Motivation
