

ABSTRACT

Moh. Latifur Rohman (2018). Effectiveness of Program Implementation Rice for Poor Households (RASKIN) in East Java. Under the guidance of Dr. Mohtar Rashid. SE ,. M.Sc.

The purpose of this study is Measure and analyze the effectiveness of the implementation of Raskin program in East Java based on those objectives. While research method used in this study through descriptive quantitative approach to the data obtained from IFLS (Indonesian Family Life Survey) were collected and if with the help of the program STATA version 14.2, as well as several studies and papers about the same topic. As an analytical tool that is used to measure effectiveness is a simple statistical analysis technique called "Plan / Completions X 100" with the help of Microsoft Excel program.

These results indicate that the level of effectiveness of the implementation of the rice program for poor households in East Java are not effective, because the achievement index of performance obtained are: Right on target by 19%, on the price of 59%, the exact amount of 19%, on time 50% and the right quality of 72%, while the administration is done with the proper observation method in one village in Sampang, pointing out that all the requirements that should be done properly and completely was not met.

Keywords : *Poverty, Rice for Poor Household (Raskin), Effectiveness.*
