

ABSTRAK

Dina Intan Permata, Faktor Determinan Kontribusi Ekonomi Istri Nelayan Terhadap Pendapatan Keluarga Nelayan Di Pulau Mandangin. Dibawah bimbingan Bapak Dr. Herry Yulistiyono, M. Si.

Penelitian ini bertujuan untuk menganalisis pengaruh faktor sosial ekonomi dan peran ekonomi istri nelayan melalui kontribusi pendapatan istri nelayan terhadap pendapatan keluarga nelayan di Pulau Mandangin, Kabupaten Sampang. Penelitian ini dilatarbelakangi oleh kondisi ketidakstabilan pendapatan nelayan yang sangat dipengaruhi oleh faktor alam, sehingga diperlukan sumber pendapatan tambahan dari anggota keluarga, khususnya istri nelayan. Penelitian ini menggunakan pendekatan kuantitatif. Sampel penelitian berjumlah 108 istri nelayan yang dipilih menggunakan teknik *purposive sampling*. Metode analisis data yang digunakan adalah *Structural Equation Model – Partial Least Squares* (SEM-PLS) untuk menguji hubungan antar variabel secara simultan.

Hasil penelitian ini menunjukkan bahwa faktor sosial ekonomi istri nelayan berpengaruh positif namun tidak signifikan terhadap kontribusi pendapatan. Sebaliknya, faktor sosial ekonomi berpengaruh positif dan signifikan terhadap pendapatan keluarga. Peran ekonomi istri nelayan terbukti berpengaruh positif terhadap kontribusi pendapatan dan secara tidak langsung mempengaruhi pendapatan keluarga melalui kontribusi tersebut. Selain itu, kontribusi pendapatan istri nelayan berperan sebagai variabel mediasi dalam hubungan antara faktor sosial ekonomi dan peran ekonomi terhadap pendapatan. Penelitian ini menunjukkan bahwa peningkatan pendapatan keluarga nelayan lebih dipengaruhi oleh keterlibatan aktif istri dalam kegiatan ekonomi produktif dibandingkan faktor sosial ekonomi semata. Oleh karena itu, pemberdayaan ekonomi perempuan nelayan menjadi faktor penting dalam meningkatkan kesejahteraan keluarga nelayan.

Kata Kunci: Faktor Sosial Ekonomi, Peran Ekonomi, Kontribusi Pendapatan, Istri Nelayan, Pendapatan Keluarga Nelayan.

ABSTRACT

Dina Intan Permata, Determinants of the Economic Contribution of Fishermen's Wives to the Household Income of Fishing Families on Mandangin Island. Under the supervision of Dr. Herry Yulistiyono, M.Si.

This study aims to analyze the influence of socioeconomic factors and the economic role of fishermen's wives through the contribution of their income to the household income of fishing families on Mandangin Island, Sampang Regency. This study was motivated by the instability of fishermen's income, which is heavily influenced by natural factors, making it necessary for family members—particularly fishermen's wives—to provide additional sources of income. This study employs a quantitative approach. The sample consists of 108 fishermen's wives selected using purposive sampling. The data analysis method used is the Structural Equation Model – Partial Least Squares (SEM-PLS) to test the relationships among variables simultaneously.

The result of this study indicate that the socioeconomic factors of fishermen's wives have a positive but insignificant effect on income contribution. Conversely, socioeconomic factors have a positive and significant effect on family income. The economic role of fishermen's wives has been shown to have a positive effect on income contribution and indirectly influences family income through that contribution. Furthermore, the income contribution of fishermen's wives acts as a mediating variable in the relationship between socioeconomic factors and economic role on income. This study indicates that an increase in the income of fishing families is more influenced by the active involvement of wives in productive economic activities than by socioeconomic factors alone. Therefore, the economic empowerment of fishermen's wives is a critical factor in improving the well-being of fishing families.

Keywords: Socioeconomic Factors, Economic Role, Income Contribution, Fishermen's Wives, Fishermen's Household Income.
