ABSTRAK

Penelitian ini merupakan penelitian kuantitatif dengan menggunakan desain *Non Eksperimental Desain*, penelitian ini dilaksanakan di kelas IV-V SDN Bumianyar 1 yang berjumlah 60 siswa. Penelitian ini bertujuan untuk mengetahui hubungan tingkat pendidikan dan pekerjaan orang tua terhadap kedisiplinan belajar siswa. Hasil penelitian menunjukkan bahwa ada hubungan yang signifikan antara tingkat pendidikan orang tua terhadap disiplin belajar siswa berdasarkan hasil perhitungan t_{hitung} , maka diperoleh nilai t_{hitung} sebesar 28,301 dan $t_{tabel\ t(\alpha/2, n-2)} = 2,002$. Dengan nilai koefisien korelasi yang diperoleh sebesar 0,966 dengan kategori *sangat kuat*. Sedangkan hasil penelitian menunjukkan bahwa ada hubungan yang signifikan antara pekerjaan orang tua terhadap disiplin belajar siswa berdasarkan hasil perhitungan t_{hitung} , maka diperoleh nilai t_{hitung} sebesar 28,743 dan $t_{tabel\ t(\alpha/2, n-2)} = 2,002$. Dengan nilai koefisien korelasi yang diperoleh sebesar 0,967 dengan kategori *sangat kuat*. Selain itu hipotesis diterima berdasarkan nilai t_{hitung} dan t_{tabel} diperoleh $t_{hitung} > t_{tabel}$, ini berarti H_0 ditolak dan H_a diterima. Sehingga ada hubungan yang signifikan antara tingkat pendidikan dan pekerjaan orang tua terhadap kedisiplinan belajar siswa SDN Bumianayar 1.

Kata kunci: Tingkat Pendidikan Orang Tua, Pekerjaan Orang Tua dan Disiplin Belajar

Fatoni, Faisal. 2018. A Correlation Between Parents' Education Level and Occupation Through Students Learning Behavior in SDN Bumianyar 1. Thesis. ABSTRACT

This research used quantitative research design with *non experimental design*. This research was conducted in IV-V grades in SDN Bumianyar 1 with 60 students. The aim of this research was to investigate a correlation between parents' education level and occupation through students learning behaviour. The research findings indicate that there is a significant correlation with parents' education level through students learning behaviour based on the computation of t_{count} , then it is obtained that t_{count} is 28,301 and $t_{table} t(\alpha/2, n-2) = 2,002$ with the correlation of coefficient value was 0,966 and it is categorized as very strong (high). However, the research findings also show that there is a significant correlation with parents' occupation through students learning behaviour based on t_{count} is 28.743 and $t_{table} t(\alpha/2, n-2) = 2,002$ with the correlation of coefficient value was 0,967 and it is categorized as very strong (high). Moreover, the hypotheses is accepted based on t_{count} and t_{table} , in which $t_{count} > t_{table}$. It shows that H_o is rejected and H_a is accepted. Hence, there is a significant correlation between parent's education level and occupation through students learning behaviour in SDN Bumianyar 1.

Keywords: *parents' education level and occupation, students learning.*
