

ABSTRACT

Miftachul Syahrul Ramadhan, Analysis Of The Effect Of Land Area, Income Level, Education Level, Number Of Dependents Responsibilities On The Opportunity Of Labor Migration From Agriculture To The Non-Agriculture Sector (Case Study in Gempol Pendowo Village, Glagah District, Lamongan Regency). Supervised by Titov Chuk's Mayvani, S.E., M.E.

This study aimed to identify whether there was a relationship between the variables of land area, income level, education level, and number of family dependents on opportunities for labor migration from the agricultural to non-agricultural sectors in Gempol Pendowo Village, Glagah District, Lamongan Regency. The researchers used a quantitative approach. The determination of samples number in this study used the Slovin method therefore 92 samples were obtained from a total population of 1,019 people. In processing the data, the researcher used the Logistic Regression Technique (binary logistic regression) because the researcher believed that this method can explain the relationship between the independent variable and the dependent variable which has an ordinal scale. Based on the results of the study, it showed that the variable area of land owned had a negative effect, which meant that the wider the area of land owned, the lower the opportunity for someone to change jobs. Meanwhile, the variables of Income level, education level, and number of dependents had a positive influence on labor migration from agriculture to the non-agriculture sector.

Keywords: Labor Migration, Agricultural Sector, Non-Agricultural Sector.

ABSTRAK

Miftachul Syahrul Ramadhan, Analisis Pengaruh Luas Lahan, Tingkat Pendapatan, Tingkat Pendidikan, Jumlah Tanggungan Keluarga Terhadap Peluang Perpindahan Tenaga Kerja Dari Sektor Pertanian Ke Sektor Non Pertanian (Studi Kasus Desa Gempol Pendowo, Kecamatan Glagah, Kabupaten Lamongan). Dibawah bimbingan Bapak Titov Chuk's Mayvani, S.E., M.E.

Penelitian ini bertujuan untuk mengidentifikasi apakah terdapat keterkaitan antara variabel luas lahan, tingkat pendapatan, tingkat pendidikan, dan jumlah tanggungan keluarga terhadap peluang perpindahan tenaga kerja dari sektor pertanian ke non-pertanian di Desa Gempol Pendowo, Kecamatan Glagah, Kabupaten Lamongan. Peneliti menggunakan pendekatan kuantitatif. Penentuan jumlah sampel dalam penelitian ini yakni dengan menggunakan metode Slovin sehingga diperoleh 92 sampel dari total populasi 1.019 jiwa. Dalam mengolah data peneliti menggunakan Teknik Regresi Logistic (*binary logistic regresion*) karena metode tersebut dapat menjelaskan hubungan antara variabel bebas dengan variabel terikat yang memiliki skala ordinal. Berdasarkan hasil penelitian, menunjukkan bahwa variabel luas lahan yang dimiliki memiliki pengaruh negatif yang berarti bahwa semakin luas lahan yang dimiliki maka semakin rendah peluang seseorang untuk berpindah pekerjaan. Sedangkan pada variabel tingkat pendapatan, tingkat pendidikan dan jumlah tanggungan keluarga memiliki pengaruh yang positif terhadap perpindahan tenaga kerja dari sektor pertanian ke non-pertanian.

Kata Kunci : Perpindahan Tenaga Kerja, Sektor Pertanian, Sektor Non-Pertanian.
