

Anisatul Jannah. NIM 130321100008. Peran Kelompok Tani terhadap Peningkatan Pendapatan Petani Padi (Studi Kasus di Desa Bulay Kecamatan Galis Kabupaten Pamekasan). Dibawah bimbingan Dr. Ir. Slamet Subari, M.Si.

ABSTRAK

Penelitian ini dilakukan di Desa Bulay Kecamatan Galis Kabupaten Pamekasan karena produktivitas padi yang dicapai sebesar 6,36 ton/Ha dan memiliki kelompok tani yang aktif. Namun, sebagian masyarakat beranggapan kelompok tani tidak memiliki peranan penting. Tujuan penelitian ini mengetahui pendapatan, perbedaan pendapatan petani kelompok tani dan petani non kelompok tani serta peran kelompok tani terhadap pendapatan petani. Sampel yang diteliti sebanyak 86 responden (40 responden kelompok tani dan 46 responden non kelompok tani), dengan menggunakan simple random sampling. Analisis yang digunakan yaitu Pendapatan, Uji t dan Chi Square. Hasil penelitian menunjukkan bahwa pendapatan rata-rata petani kelompok tani Rp 18.412.292,-/Ha dan petani non kelompok tani Rp 14.325.387,-/Ha yang berarti terdapat perbedaan antara pendapatan kelompok tani dan non kelompok tani. Berdasarkan hasil pengujian Chi Square diketahui terdapat hubungan nyata antara peran kelompok tani terhadap peningkatan pendapatan petani.

Kata kunci : petani, kelompok tani, pendapatan

Anisatul Jannah. NIM 130321100008. The Role of Farmer's Group on the Increase in Farmer's Rice Field Income (Study Case in Bulay Village Galis District Pamekasan Regency). Supervised by Dr. Ir. Slamet Subari, M.Si.

ABSTRACT

The research was conducted in Bulay Village Galis District Pamekasan Regency because rice productivity achieved by 6,36 tons/Ha and having the farmer's group active. But, some community members assume that farmer's group does not have an important role. The purpose of this research to know income's difference farmer's group and non farmer's group and the role of farmer's group on farmer's income. Sample is 86 respondents (40 respondents farmer's group and 46 non farmer's group) by simple random sampling. Analyzed by income, t test and Chi Square. The result that average income of farmer's group Rp 18.412.292,-/Ha and non farmer's group Rp 14.325.387,-/Ha that means there are differences between the farmer's group income and non farmer's group. Based on the testing Chi Square is known there are relations between the role of farmer's group on increased farmer's income.
